# UPM Paper ENA

## Editorial

After COP 22 in Marrakech, the Paris agreement becomes irreversible with the signature of 111 states out of 193 engaged. However, the carbon emissions remain beyond the 2°C scenario and financial resources are lagging behind.

This situation makes the commitment of companies like ours even more critical. UPM continues its actions to offer safe, renewable products with low environmental impact. Discover our latest news in the articles below.

### Solar Success for UPM Shotton

A link up between UPM Shotton mill and the UK's largest solar park means the mill is now capable of producing newsprint from 100% green energy. It's another milestone in the mills responsibility story, contributing to UPM's ambitious 2030 target of reducing CO2 emissions by 30%.

### Responsible water use

Through responsible water use UPM aims to highlight the global importance of water resources and the need for good water management. In addition to implementing best practice in our own processes to manage water and mitigate water risk, UPM is also supporting projects spanning from Finland, to Poland and China.
